APRIL 19

Supraja

2015

Since time immemorial the Indian society was known for its quality and excellence in each and every aspect of life, this includes health, education, family life, social structure, economic development etc. Over a period of time, due to various reasons many of the ancient treasures were lost in the modernization of life style !

Ayurveda, the science of life has its origin in India, deep rooted in the vedic knowledge. In this era of globalization, ayurveda too getting its due share. The modern society's life style, diet habits, pollution, industrialization etc. have made definite impact on present day society. Along with the benefits, there are ample of negative impacts too, one such threat is on health, a major issue today. The feature progeny is on the wedge of genetically and hereditary diseases which are increasing alarmingly.

Can we correct the genetical or hereditary abnormalities with this? probably the answer is YES !

There are four factors for procreation and any fault in any of these will result in to improper reproduction or the product of such will have one or other problems. These factors includes *Ritu* (The ideal season age of couple time of copulation i.e. during Ritukala of Female partner) *Kshetra* (The site/place – here the Female Uterus), *Beeja* (The reproductive organs and principles of partners) and *Ambu* (The nutrition for the foetus); when all these factors are of excellent quality the product of the resultant also will be excellent quality.

If a properly educated couple will go for best quality of children, (healthy children are the healthy citizen of tomorrow) then as a result of this a day may come wherein whole society will be healthy many diseases may be prevented at its root itself, and even grave diseases will be easy to cure.

To Achieve this Objective in present era, and to spread awareness about garbhvigyan let's be part of this seminar.
